## CAREER OBJECTIVE

As a passionate and goal-oriented engineering graduate, I am seeking an internship position in a dynamic organization where I can apply my technical knowledge, problem-solving skills, and innovative thinking to contribute to organizational growth while continuously developing my professional expertise. I aim to leverage my academic background, practical project experience, and enthusiasm for learning to build a strong foundation for a successful engineering career.

## EDUCATION

- Bachelor of Technology (CSE-CS) 2023-Pursuing
  Sri Venkateswara College of Engineering – Tirupathi, Andhra Pradesh CGPA: Pursuing
- Board of Intermediate Education (MPC) 2021-23
  Narayana Jr college – Kadapa, Andhra Pradesh 94.5%
- Board of Secondary Education 2021
  Happy Kids International High school – Madhavaram, Andhra Pradesh 98.6

## SKILLS

- **Languages:** C, Java, Python
- **Web development:** HTML, CSS, JavaScript
- **Python Libraries:** Pandas, Numpy, Matplotlib
- **Data Base**: MYSQL, Excel
- **Soft Skills:** Communication, Collaboration and Adaptability**.**
- **Tools and Platform**: Ecllipse, VS Code
- **Version Control and Deployment**: GitHub
- Ethical Hacking
- Basic DSA using Python

**PROJECT**

1. **Project Title:** Quiz Game
   - **Technologies Language:** Python
   - **Project Description:** Developed an interactive console-based quiz game that asks multiple-choice questions to the user, checks their answers, and calculates the final score and percentage. The program provides feedback on performance and allows the user to replay the quiz.
   - **Outcomes:**
     - **a.** Strengthened understanding of Python control structures and data handling.
     - **b.** Gained experience in creating interactive console applications**.**
     - **c.** Learned how to use loops and functions to organize program flow.
     - **d.** Improved logical thinking, problem-solving, and user engagement techniques in coding.
2. **Project Title**: Caesar Cipher Tool
   - **Technology/Language:** Python
   - **Project Description:** Developed a console-based encryption tool that encodes and decodes messages using a shift-based cipher. The program maintains original text formatting while securing the message content.
   - **Outcomes:**
     - **a.** **Logic Application**: Utilised modular arithmetic to manage alphabet wrap-around.
     - **b.** **Data Handling**: Applied conditional checks to preserve letter cases and special characters.
     - **c.** **Program Flow:** Used functions and while-loops to create a reusable, interactive interface.
     - **d.** **Problem Solving**: Simplified complex logic by using a single algorithm for both encryption and decryption.

3. **Project Title: Hangman Game**
   - **Technology/Language:** Python
   - **Project Description:** Developed a word-guessing game featuring visual hangman stages and a life-tracking system. The program handles letter validation and dynamic word updates until a win or loss condition is met.
   - **Outcomes:**
     - **a.** **Modular Programming:** Managed external modules for word lists and ASCII art graphics.
     - **b.** **Logic Design:** Built a loop-based system to track guesses, verify inputs, and manage remaining lives.
     - **c.** **List Manipulation:** Utilised list indexing to reveal correctly guessed letters in real-time.
     - **d.** **Error Handling:** Implemented duplicate-guess detection to improve the user experience.

---

**CERTIFICATIONS**

- **Ethical Hacking Workshop(5 days)** :Completion Certificate
  - I have hands-on exposure to basic penetration testing, networking concepts, and security tools.
- **Generative AI Tools** : Participation Certificate.

- Practical usage of AI tools for Content generation, coding assistance, and productivity.

---

**DECLARATION**

I hereby declare that above mentioned particulars are true to the best of my knowledge.

.
